(Ground Floor)

Bridge Building in the Education System and Academic Practice

My presentation will walk us through how the work of educators and scholars in and out of a professional school, if not throughout the system as a whole, can be productively understood as building bridges between people, ideas, and possibilities. Drawing from examples across my 35-year career as a professor and educational researcher, I will explore how this notion can help us think about the challenges facing educators and the system, what academic practice is, and how both it and the system can be improved.

Michael S. Knapp, a Professor Emeritus of Educational Leadership and Policy Studies in the University of Washington College of Education, and for two decades the Director of the Center for the Study of Teaching & Policy, has focused his teaching and research on educational leadership and policymaking, school and school system reform, the professional learning of teachers and administrators, and methods of inquiry and policy analysis.
